

## Algorithm - Week 4 Assignment

```
float f(int n, float x) { //n > 1, x!=0
    float s = 1;
    for (int i = 1; i<=n; i++) {
        float p = 1;
        for (int j = 1; j <= i; j++)
            p = p*x/j;
        s = s+p;
    }
    return s;
}
```

**C1:** 1  
**C2:** (n + 1)  
**C3:** n  
**C4:** (i+1),  $\sum_{i=1}^n (i+1) = 1+\dots+(n+1) = \frac{n(n+2)}{2}$   
**C5:** i,  $\sum_{i=1}^n (i) = 1+\dots+n = \frac{n(n+1)}{2}$   
**C6:** n  
**C7:** 1

$$T(n) = 1 + n+1 + n + \frac{n(n+2)}{2} + \frac{n(n+1)}{2} + n + 1 = 3 + 3n + n^2 + n = n^2 + 4n + 3 \leq 5n^2, \forall n \geq 1$$

Độ phức tạp của hàm trên là  $O(n^2)$  với  $C = 3$  và  $n_0 = 1$

I am truly sorry for always submitting the assignments later than the due date, I got work at night so I can't finish homework on time.
